

## **2016 SPRING SHEEP OPTIMISER WORKSHOPS**

- **Sheep Health Take #2** - Pulpy Kidney, OJD, Campylobacter, Foot ...Scald!?! And that's before we even get to flies, worms and lice! Following last year's popular 'How Many Vaccinations?!' presentation, vet, consultant and farmer Tim Watts is back to prevent more misadventures in sheep.
- **Pastures From Space Plus (PFSP) 2016** – It's back with more detail and more tools to make stock & pasture management decisions easier and more accurate. Norm Santich from Landgate will be taking PFSP for a drive and showing off all the applications and benefits of this great piece of technology.
- **Sheep – More Money Less Work** - Is it possible? Following The Sheep's Back state wide survey, Icon Agriculture will tell you the state wide production results, what's possible in your area and what's required to deliver financial returns in your environment.
- **Tools of the Trade** – There is plenty of technology available for growers but what tech is actually making/saving money and time? Ed Riggall reviews tools such as chaff carts, sheep apps, sheep handlers, remote cameras and drones as well as checking out developing technology.
